

PANEL MOULDINGS

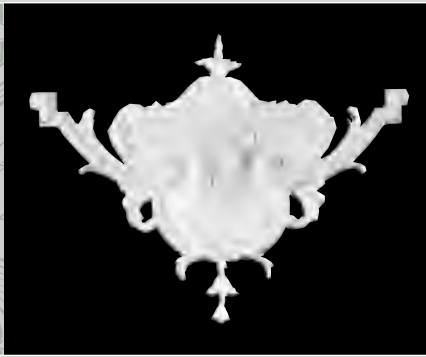

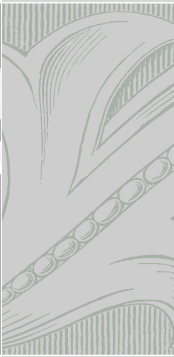

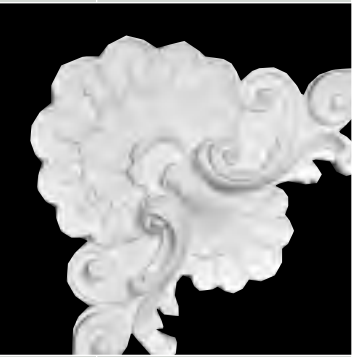

**PANEL MOULDINGS:**

*mouldings used to frame areas of the wall or ceiling. Panel mouldings may sit proud of the wall surface, or sit flush in order to frame a recessed area; they may also frame a raised panel.*

## PANEL MOULDINGS

Walls began to be divided during the beginning of the 18<sup>th</sup> century (early Georgian period) into the frieze, field and dado, which was inspired by the proportions of the architrave, column and base in classical architecture. Both the field (above the chair rail) and the dado (below the chair rail) could be defined by sets of panel mouldings, which formed rectangles or squares. This moulding might be figured with a bead and barrel or lamb's tongue motif, among others,

or merely contoured by using all the varieties of classical shapes: ogee, reverse ogee, cavetto, etc. The use of panel mouldings has waxed and waned over the centuries, becoming quite prominent during the late 1700's with Robert Adam's brilliant reinterpretation of classical motifs. Panel moulding also includes the "S" and "C" curves, identified with the exuberant period of Rococo plasterwork, when panel mouldings with mid-panel drops became quite extravagant.
