

NICHES
GRILLES

NICHE:

a recessed shape or hollow, usually in a wall, meant for a statue, vase or other erect, decorative ornament. Niches were sometimes square, but more often circular at the back, terminating in a half dome at the top.

NICHES

Niches are useful for adding architectural dimension to foyers, dining rooms, hallways, stair landings, and the wall under or over stair headers. A niche holds a myriad of things—sculpture,

plate, art glass... but whatever is held is set apart as “treasure”. Niches both select from and add to the room as a whole.

INSTALLATION INFORMATION

A niche consists of a shaft with a plain or decorative shell which caps the shaft. Usually, a niche shaft measures up to 36" in height, but since there are endless applications, any height may be ordered up to the inches indicated adjacent to each model. Anything taller will be considered a custom order, and priced accordingly.

A bottom sill is not included in the niche price, as many clients prefer to use marble, wood, stone or plain drywall. The moulded plaster sill is provided at an additional charge, and must be specified at time of order. Please note that some niches are shown with casing, and some

without. Any niche may be ordered either way without affecting the cost. Any niche may also be ordered with either a plain, smooth shell or a decorative shell. Please specify when ordering. Finally, an opening in the top center area of the niche may be drilled to accommodate a light. This must be specified upon ordering. Note: All dimensions for niches are without casings.

When installing a niche, the opening made in the drywall should be two inches larger on each side than the actual inside measurement of the niche. The niche is then affixed with Durabond 90™, or an equivalent plaster glue compound.

Decorative or smooth keystone available in dimensions to complement casing widths.

Standard casing. Any custom casing profile can be made.

Corner blocks are available to complement casing widths.

Niche shafts may be ordered at any required height.

Sills are optional. They may be ordered straight-edged or rounded.

grilles

Grille: a grate, often of decorative open work, used to obscure the view beyond without obstructing airflow.

Decorative plaster grilles may be used in the traditional manner—that is, as a framed piece mounted in front of an air source or air return... or may be incorporated into a frieze, cornice or ceiling coffer in order to hide audio speakers, air conditioning, or heating and air return units.
